**Lenze**

**Lenze**

## **Our commitment to you**

If you are looking for effective and easy solutions for the implementation of your machine and drive concepts or want to optimise existing concepts and cut your costs, Lenze is your ideal partner.

We have more than 60 years' experience at the cutting edge of drive and automation technology.

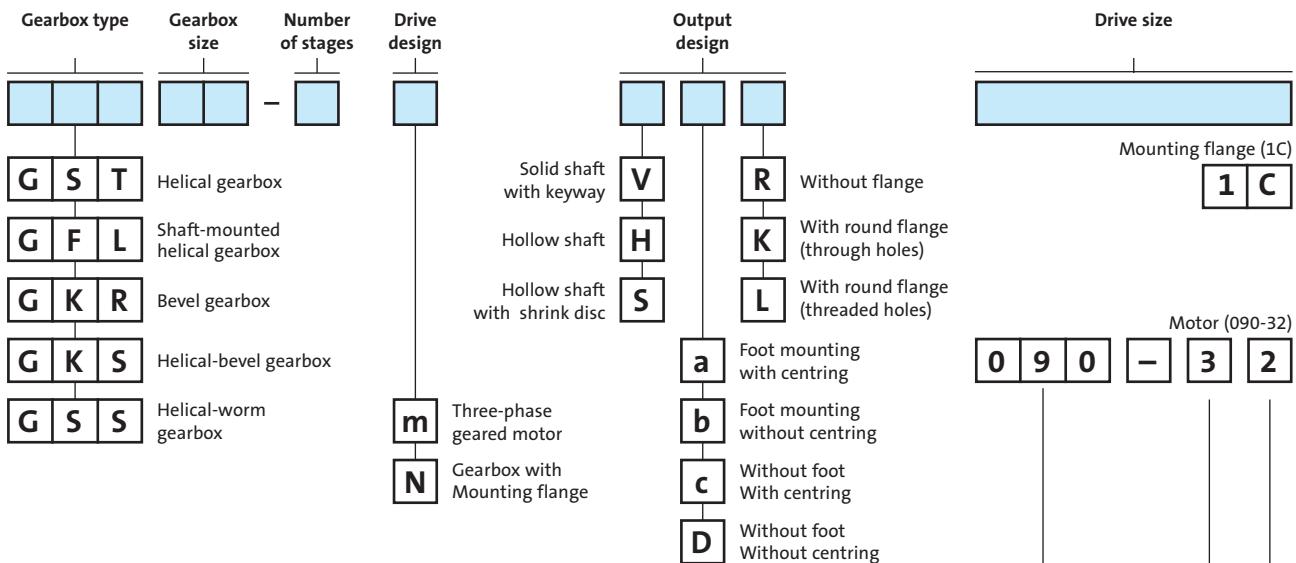

**Drive and automation technology set in motion by Lenze – for example in logistics centres, in the textile and printing industry, in the automotive industry or as the driving force behind robots.**

# Lenze | about us

We can offer you automation solutions, including control, visualisation and drive technology, from one source. Our drive systems will improve the performance of your machines. From project planning to commissioning, we have the know-how. Our international sales and service network can provide you with expert help and advice at any time.

Cut your process costs and increase your ability to compete. Let us analyse your drive technology tasks and support you with made-to-measure solutions.

We can take an integrated approach to projects thanks to the scalability of our products and the scope of the overall portfolio. We can get the best from your machines and systems.

**At your side all over the world – with thorough and professional support from our motivated team.**

# A true system

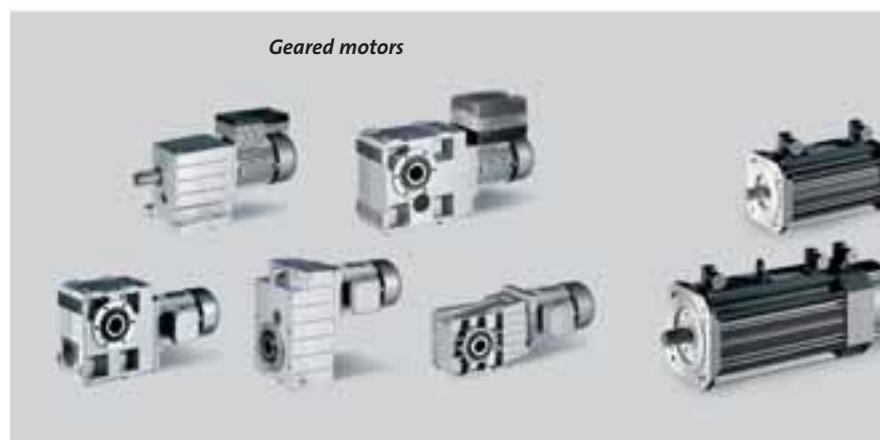

Drive and automation technology

Products which are setting the pace in terms of technology and complete drive solutions for machine and system production - just what Lenze is all about. We provide our customers with frequency and servo inverters with powers up to 400 kW. We support both central control cabinet solutions and decentralised drive concepts, e.g. with motor inverters with IP65 type of protection.

Both standard three-phase AC motors and synchronous and asynchronous servo motors are available to complement the various controllers, all of which can be combined with various types of gearboxes. Human Machine Interfaces, decentralised I/O systems and modules for fieldbus interfacing are also available for exchanging information.

Lenze boasts extensive application know-how in all manner of industries. This knowledge has been applied in the design of the controller and PC software, providing an efficient means of implementing numerous standard applications using simple parameter settings.

An all-round service comprising component selection advice, training, commissioning support and even a helpline which can be accessed all over the world and independent system engineering completes the offer.

# Geared motors

The range

## The G-motion range - a tried-and-tested and versatile range of geared motors covering all standard gearbox designs

The G-motion range of geared motors already comes with broad functionality as standard and is available with many useful options at the input and output ends, giving the user great versatility.

### Gearbox types

The gearboxes are available as

- ▶ Helical gearboxes
- ▶ Shaft-mounted helical gearboxes
- ▶ Helical-bevel gearboxes
- ▶ Helical-worm gearboxes
- ▶ Servo planetary gearboxes

### Speeds

The large range of gearbox ratios with close spacing makes it possible to closely match the actual drive features to the required process parameters.

### Integrated three-phase AC motors

- ▶ 4-pole 0.06 to 45 kW
- ▶ 2-pole 0.18 to 9 kW
- ▶ 6-pole 0.18 to 0.55 kW
- ▶ Synchronous servo motors 0.25 to 10 kW
- ▶ Asynchronous servo motors 0.8 to 20.3 kW

## G-motion const/G-motion atex

Geared motors and gearboxes with constant output speeds

- ▶ Power range 0.06 to 45 kW
- ▶ Torque range ≤ 12000 Nm

## G-motion motec

Geared motors with integrated 8200 motec frequency inverter

- ▶ Power range 0.12 to 7.5 kW
- ▶ Torque range ≤ 12000 Nm

### **G-motion** servo MC/MD

#### **Dynamic geared motors**

► Power range 0.25 to 20.3 kW

► Torque range ≤ 12000 Nm

### **G-motion** m-var

#### **Geared motors with mechanical speed control**

► Power range 0.25 to 45 kW

► Torque range ≤ 12000 Nm

### **G-motion** EHB

#### **Monorail overhead conveyor geared motors for light and heavy loads**

► Power range 0.12 to 5.5 kW

► Torque range ≤ 900 Nm

### **Lenze ATEX-compliant geared motors and gearboxes**

ATEX directives regulate the use of equipment in potentially explosive atmospheres throughout Europe, thus harmonising the various national standards that exist. Not only electrical equipment, but also mechanical, pneumatic and hydraulic devices and device components are critically evaluated in terms of the associated potential for explosion. Previously, such devices had been classified as non-critical system components in respect of explosion protection.

Furthermore, the number of zones for potentially dust explosive atmospheres has been increased from two to three. Against the backdrop of this EU Directive 94/9 EC, in its capacity as a manufacturer Lenze has carried out a comprehensive hazard analysis of its gear case, evaluated the ignition dangers associated with the gearbox and made design adaptations.

## General

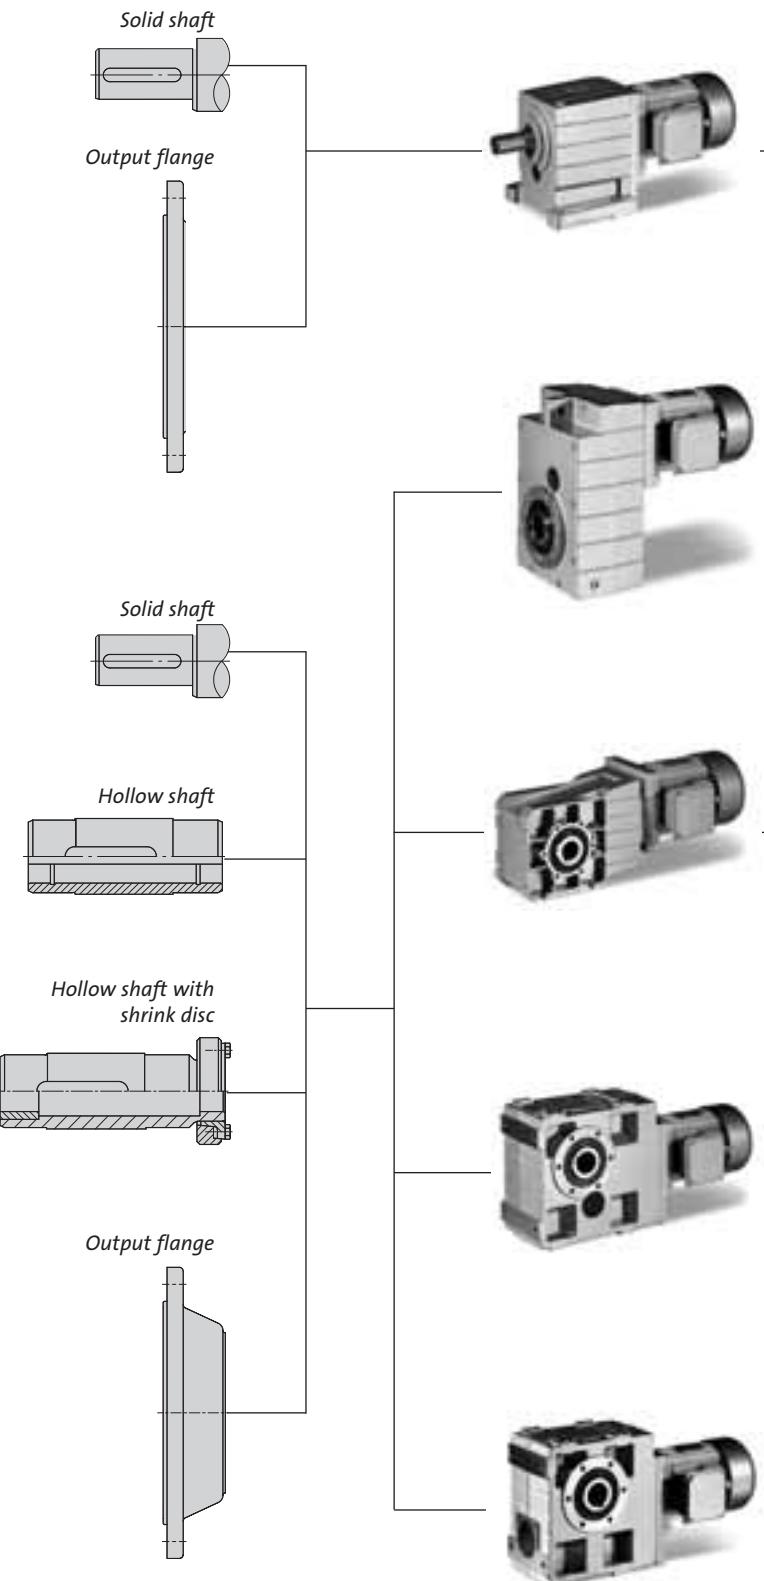

### The range

#### Lenze ATEX-compliant gearboxes

Lenze offers drive solutions for use in potentially explosive atmospheres. Users can choose from a comprehensive range of gearboxes and geared motors for use in ATEX categories 2GD and 3GD (dust and gas). Integrated motors can be used where space is at a premium, even for category 2. Thanks to the use of synthetic lubricants and optimised shaft sealing rings, users are provided with a durable geared motor that is easy to maintain.

These gearboxes/geared motors are used in many sectors, including:

- ▶ Materials handling technology, logistics, transport
- ▶ Building services engineering, including air conditioning
- ▶ Packaging technology
- ▶ Automotive industry (paint finishing systems)
- ▶ Wood working machines
- ▶ Chemicals and processing industries
- ▶ Municipal facilities (wastewater treatment plants, biogas plants)
- ▶ Food, beverages and tobacco industries
- ▶ Process engineering

***Helical gearboxes/geared motors  
GST***

High permissible radial forces and torques along with closely stepped speed reduction ratios are the key features of these highly economical 1, 2 or 3-stage geared motors, which are of a robust design.

***Shaft-mounted helical  
gearboxes/geared motors GFL***

These parallel shaft-type helical gearboxes are primarily used as shaft-mounted gearboxes. As well as offering the possibility of power or torque sharing, the driven shaft is accessible for other applications.

***Bevel gearboxes/geared motors  
GKR***

High efficiency, low weight and wear-free teeth characterise this 2-stage, low-maintenance right-angle gearbox in the lower torque range.

***Helical-bevel gearboxes/geared  
motors GKS***

The excellent performance of these 3 and 4-stage built-on right-angle gearboxes is what sets them apart. Thanks to the robust cast iron housing, high permissible torques and closely stepped speed reduction ratios, they can meet even the most stringent of requirements.

***Helical-worm gearboxes/geared  
motors GSS***

The low noise 2 and 3-stage helical-worm gearboxes are the perfect compromise between single-stage worm gearboxes, which offer an excellent price/performance ratio, and (helical-)bevel gearboxes, which offer a high degree of efficiency.

### Primary and secondary measures

In order for an explosion to take place, a flammable substance (gas, dust, liquid), a sufficient quantity of oxygen and an ignition source all need to be present in the correct mix ratio. There are currently 13 different known such ignition sources, of which only half are electrical. In addition to sparks, arcing or static charges, hot surfaces, mechanically generated sparks and ultrasound all play an important role.

Primary explosion protection is another important aspect of the ATEX directive. Suitable measures are implemented to prevent explosive atmospheres from forming in the first place. These measures include, for example, the general avoidance of flammable substances and the use of non or hardly combustible raw materials. Additional measures include the inerting of systems, involving the careful use of inert gases to reduce the explosiveness of flammable mixtures. Means of preventative explosion protection include the restriction of emissions and the natural and technical ventilation of production areas.

Explosion protection is not just a matter of flammable gases or evaporated liquids. Today, a significant number of explosions can be traced back to the inadequate protection of dust areas. This is why the ATEX directive is much more concerned with dust explosion protection than previous legislation and, under the ATEX directive, the designation and certification of equipment for use in these areas has been substantially expanded.

### Explosion-protected equipment

Category	Device group I Mines, mine gas		Device group II Other potentially explosive atmospheres (gas or dust)					
	M1	M2	1		2		3	
Potentially explosive atmospheres <sup>1)</sup>			G	D	G	D	G	D
Zone			0	20	1	21	2	22
Gearbox type of protection					c, k	c, k	c	c

<sup>1)</sup> G = Gaseous atmosphere, D = Dusty atmosphere

## Categories and zones

Category	Zone	Degree of protection	Operating conditions/availability
1G	0	Very high	Explosive atmosphere is present frequently and for long periods. Special machine manufacture - not included in the gearbox manufacturer's range of products.
1D	20		
2G <sup>1)</sup>	1	High	Explosive atmosphere is present at intervals. Lenze drive components can be supplied for constant and variable output speeds.
2D <sup>1)</sup>	21		
3G <sup>1)</sup>	2	Normal	Explosive atmosphere is present only rarely and for short periods. Lenze drive components can be supplied for constant and variable output speeds.
3D <sup>1)</sup>	22		

## Types of protection

Device type	Type of protection	Standard	Description
Gearbox (mechanical devices)	c <sup>1)</sup>	EN 13463 Part 5	Constructional safety
	k <sup>1)</sup>	EN 13463 Part 8	Liquid immersion

<sup>1)</sup> Sections marked in grey can be provided with Lenze drives.

### General information about the data provided in this catalogue

#### Outputs, torques and speeds

The outputs, torques and speeds specified in the catalogue are rounded values and apply to:

- ▶ Operating time/day = 8 h (100% OT)
  - ▶ Duty class I for up to 10 switching operations/h
  - ▶ Mounting positions and designs in this catalogue
  - ▶ Standard lubricant
  - ▶  $f_{\text{mains}} = 50 \text{ Hz}$  constant
  - ▶  $T_{\text{amb}} = 20^\circ\text{C}$  for gearbox  
 $40^\circ\text{C}$  for motors (in accordance with EN 60034)
  - ▶ Site altitude  $<= 1000 \text{ m amsl}$
  - ▶ The selection tables provide the permissible mechanical powers and torques. For notes on the thermal power limit, see page 2-2.
  - ▶ The rated power specified for motors and geared motors applies to operating mode S1 (in accordance with EN 60034).
- Under different operating conditions, the values obtained may vary from those listed here.  
In the case of extreme operating conditions, please consult your Lenze sales office.

#### Load capacity $c$ of gearbox

Characteristic value for the load capacity of Lenze geared motors.

- ▶  $c$  is the ratio of the permissible rated torque of the gearbox to the rated torque delivered by the drive component (e.g. the integrated Lenze motor).
- ▶  $c$  must always be greater than the application factor  $k$  determined for the application.

#### Application factor $k$ (corresponding to DIN 3990)

Takes account of the effect of any loads that are actually present and that vary during the anticipated operating time of gearboxes and geared motors.

$k$  depends on

- ▶ The type of load
- ▶ The load intensity
- ▶ Temporal influences

We aim to process your order quickly and accurately.  
Therefore, please ensure that your order details are complete.  
The following checklist and ordering procedure should help.

**Checklist**

In order to receive the correct products in good time, please provide the following information:

- ▶ Your address and order data
- ▶ Our product keys for the individual products in this catalogue
- ▶ Your delivery details, such as delivery date and delivery address

**Ordering procedure**

Please use this step-by-step guide and the fax order forms to ensure that you provide all the necessary information in the correct format. It makes ordering your tailor-made drive extremely easy:

- ▶ Copy the fax order forms.  
See pages 1-14 to 1-20.
- ▶ Enter the order data.
- ▶ Post or fax the forms to your Lenze sales office.  
A list of Lenze sales offices can be found at the end of this catalogue.

## Thermal power limit

The permissible gearbox continuous power is restricted by:

- ▶ The mechanical power, defined by the material strength of the individual components or
  - ▶ The thermal power limit, defined by the heat balance
- The thermal power limit may be lower than the mechanical power rating indicated in the selection tables.

The thermal power limit is affected by:

- ▶ The churning losses associated with the lubricant. These are determined by the mounting position and circumferential speed of the gears.
- ▶ The load and the speed
- ▶ The ambient conditions: temperature, air circulation, heat input or dissipation via shafts and the foundation

Please consult the Lenze sales office

- ▶ if you are using the following gearbox type, size and ratio combinations at input speed  $n_1 > 1500$  rpm:

Gearbox type	Gearbox size	Ratios $i <$
GST	07, 09, 11, 14	10
GFL	07, 09, 11, 14	16
GKS	07, 09, 11, 14	25

...or if the input speeds  $n_1$  listed are exceeded:

Mounting position	Motor frame size	
	063...100	112...132
	Drive size	
1A...□E	□F...□G	
A, B, E, F	3000 rpm	3000 rpm
C, D	3000 rpm	1500 rpm

# Drive dimensioning

## Dimensioning

### 1. Determination of the required load capacity

Specify the torque  $M_2$  and speed  $n_2$  required at the output.

Calculate the required motor power  $P_1 = \frac{M_2 \cdot n_2}{9550 \cdot \eta}$

Specify the duty class:

Duty class	Duty type	Intensity	
I	Smooth running, no or minor shocks	$F_I \leq 1.25$	$F_I \text{ (geared motor)} = \frac{J_{ext} + J_{motor}}{J_{motor}}$
II	Irregular running, average shocks	$1.25 < F_I \leq 4$	
III	Irregular running, major shocks and/or alternating load	$F_I > 4$	$F_I \text{ (gearbox)} = \frac{J_{ext} + J_A}{J_A}$

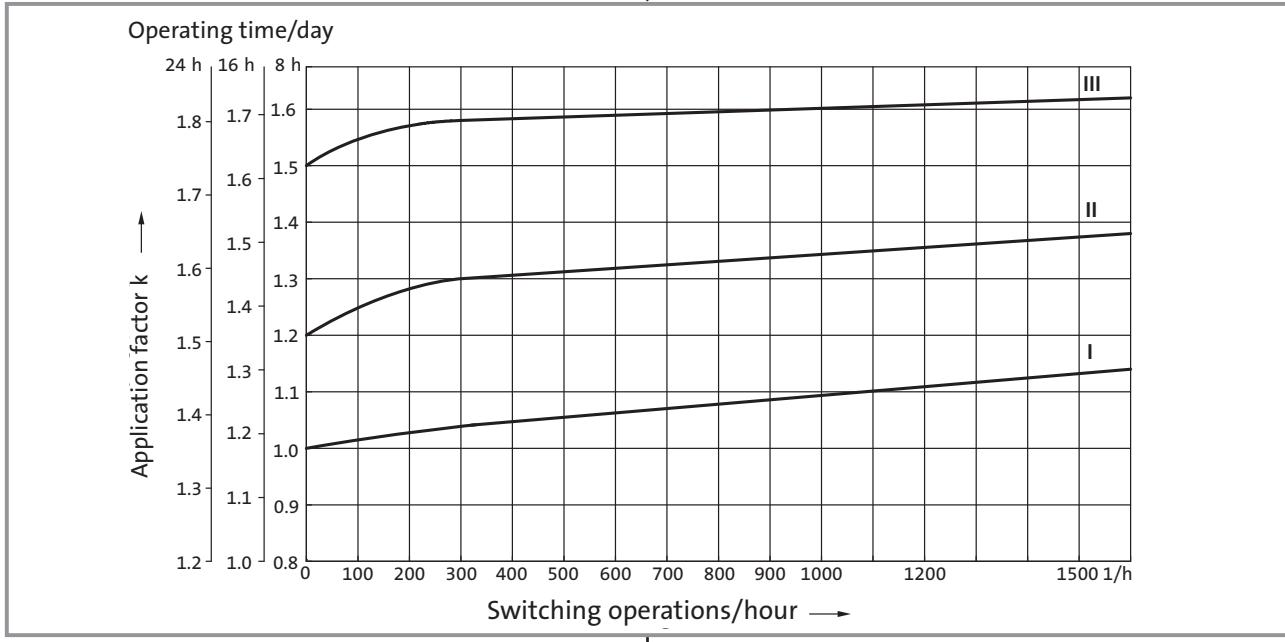

Specify the temporal influences:

- Operating time/day
- Switching operations/hour

Determine the application factor  $k$  for the machine from the diagram

Geared motor requirement:  $c$  (selection table)  $\geq k$

Gearbox requirement:  $M_2 \text{ perm}$  (selection table)  $\geq M_2 \cdot k$

## 2. Calculating the axial and radial forces applied to the gearbox shaft

### Determining the available axial and radial forces

Rough calculation of radial forces:

$$F_r = 2000 \cdot \frac{M_2 \cdot f_z}{d_w \text{ [mm]}}$$

$f_z$	Transmission element
1.12	Gears
1.25 ... 1.4	Chain wheels
1.5	Toothed belt pulleys
1.5 ... 2.0	V-belt pulleys depending on pretension

### Requirement:

►  $F_{r\text{perm}} \geq F_r$   
( $F_{r\text{perm}}$  from gearbox-specific data)

►  $F_{a\text{perm}} \geq F_a$   
( $F_{a\text{perm}}$  from gearbox-specific data)

## Drive dimensioning

### Gearbox designs

#### Gearbox with mounting flange design N

##### Mounting flange:

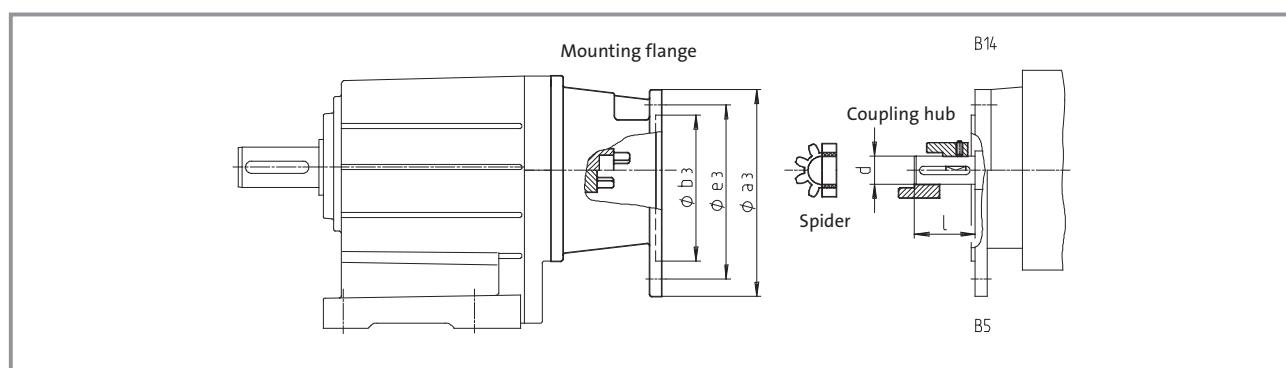

- Flange dimensions suitable for motors in accordance with IEC 72/DIN 42948
- Shaft in two bearings
- Gearbox-side coupling half integrated in the shaft

##### Spider (ring gear):

- Torsionally stiff
- Isogonal
- Low backlash (backlash-free with clamping hub/ clamping ring hub)

##### Coupling hub:

- Standard: Coupling hub with keyway for motor shafts in accordance with IEC
- Optional coupling hubs for frequent shocks and load alternation or reduced coupling backlash:
  - Clamping hub with tangential clamping screw for motor shafts with keyway, backlash-free
  - Clamping ring hub for motor shafts without keyway, backlash-free, particularly recommended for servo motors

#### Geometric assignments for IEC standard motors

See selection tables for gearbox with mounting flange for permissible driving powers and output torques.

Dimensions in [mm]

<sup>1)</sup> Only clamping hub possible

## Gearboxes with ventilation

### **Gearbox size 04 and gearbox type GKR**

No ventilation is required for these gearboxes.

### **Gearbox size 05 to 07**

Special measures are not usually required when using these gearbox sizes.

In borderline cases, e.g. at drive speeds >2000 rpm, we recommend that breather elements are used. We can supply these elements if required.

### **Gearbox size 09 to 14**

Ventilation units are always supplied with these gearbox sizes.

2

### **Special precautions for mounting position C (motor on top)**

We recommend that an oil compensation reservoir is always used with gearbox sizes 09 to 14 in this mounting position. This reservoir can be purchased as an option.

See technical data for illustrations and dimensions (Chapter 3...7).

It is not required at high ratios or low input speeds.  
Please contact Lenze if this affects your application.

## Drive dimensioning

### Gearbox designs

## Lubricants

Lenze gearboxes and geared motors are supplied ready for operation and filled with a lubricant appropriate for the drive and design in question. You must indicate the mounting position and design on your order in order to ensure that the correct amount of lubricant is supplied.

The lubricants that have been approved for Lenze Atex drives are listed in the lubricant table.

## Lubricant table

	Lubricants in accordance with DIN 51517-3: CLP ISO 12925-1: CKC/CKD

# Shaft-mounted helical gearbox

G-motion atex

## Technical data

Permissible radial and axial forces	
Output	4-2
Output backlash	4-4
Position of ventilation, sealing elements and oil control	4-5
Compensation reservoir for mounting position C	4-7
Weights	
Geared motors	4-8
Gearboxes with mounting flange	4-9
Additional weights	4-10

## Selection tables

Geared motors for Atex category 2G, 2D, 3G, 3D (zone 1, 21, 2, 22)	4-12
Gearboxes with mounting flange for Atex category 2GD, 3GD (zone 1, 21, 2, 22)	4-24

## Dimensions

Geared motors for Atex category 2G, 2D, 3G, 3D (zone 1, 21, 2, 22)	4-66
Gearboxes with mounting flange for Atex category 2GD, 3GD (zone 1, 21, 2, 22)	4-78
Other dimensions	
Hollow shaft with shrink disc	4-94
Foot mounting	4-96
Rubber buffer set	4-98
Hollow shaft circlip mounting set	4-99
Proposed design for auxiliary tools	4-99

# Technical data - Shaft-mounted helical gearboxes

## Permissible radial and axial forces - Output

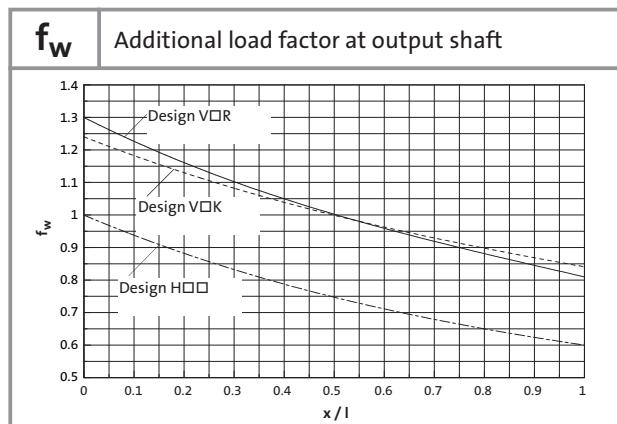

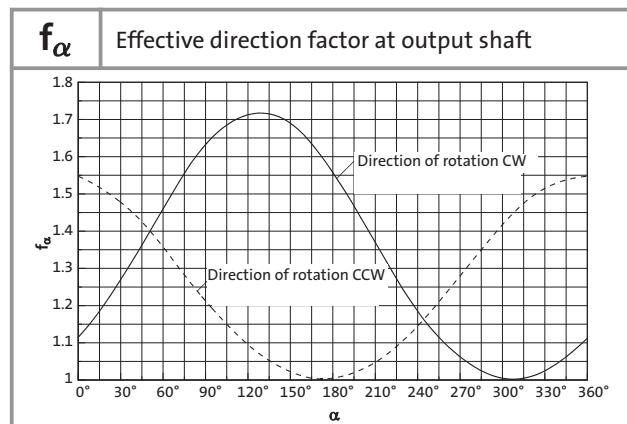

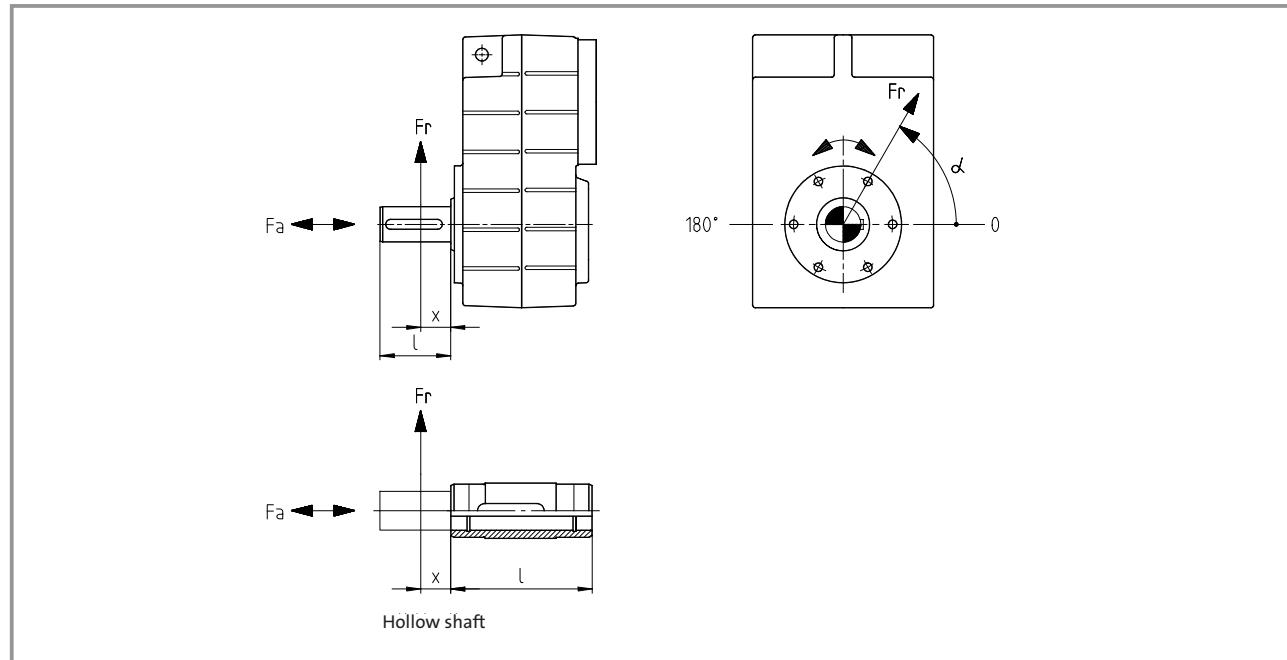

### Permissible radial force

$$F_{r\text{perm}} = \min (f_w \cdot f_\alpha \cdot F_{r\text{Tab}}, f_w \cdot F_{r\text{max}})$$

### Permissible axial force

$$F_{a\text{perm}} = F_{a\text{Tab}} \quad \text{at } F_r = 0$$

Contact Lenze      if  $F_r$  and  $F_a \neq 0$

Dimensions in [mm]

\* Ensure that the strength of the shaft material is adequate in shrink disc designs. When using typical steels (e.g. C45, 42CrMo4), the torques listed in the selection tables can be used without restriction. When using material that is considerably weaker, please consult us.

The average surface roughness Rz must not exceed 15 µm (turning operation is sufficient).

**Not suitable for through machine shaft at motor end:**  
GFL04-2M S□□ 080□□; d=30  
GFL05-2M S□□ 100C□□; d=35

Dimensions in [mm]

\*Ensure that the strength of the shaft material is adequate in shrink disc designs. When using typical steels (e.g. C45, 42CrMo4), the torques listed in the selection tables can be used without restriction. When using material that is considerably weaker, please consult us. The average surface roughness Rz must not exceed 15 µm (turning operation is sufficient).

Dimensions in [mm]

\* Ensure that the strength of the shaft material is adequate in shrink disc designs. When using typical steels (e.g. C45, 42CrMo4), the torques listed in the selection tables can be used without restriction. When using material that is considerably weaker, please consult us. The average surface roughness Rz must not exceed 15 µm (turning operation is sufficient).

Neither radial nor axial forces are permitted on hollow shafts with shrink discs (S0O).

## Technical data - Helical-worm gearboxes

### Start-up efficiency

During start-up, the start-up efficiency  $\eta_A$  of a helical-worm gearbox is lower than its operative efficiency  $\eta$  at rated speed.

The start-up efficiency  $\eta_A$  must therefore always be considered when starting under load.

The start-up efficiency is determined by the oil temperature and the degree to which the tooth faces have been run in.

The values given in the tables are theoretical values and are valid with a tolerance of  $\pm 10\%$ .

Ratio $i_r$	Start-up efficiency $\eta_A$

07	50	h6	5	110	237.5		232	192	26	124 246	

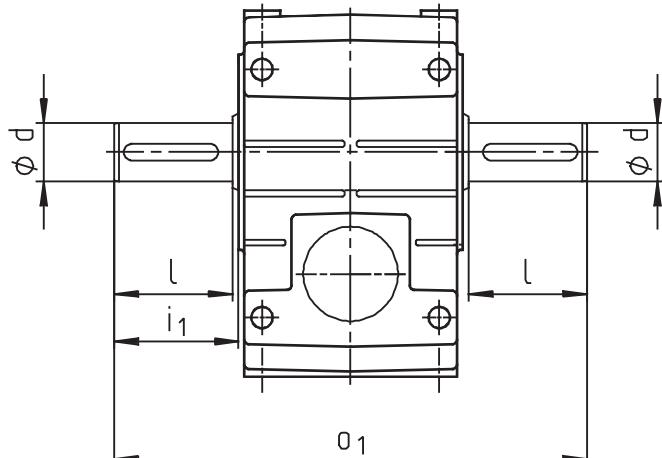

Dimensions in [mm]

\* Ensure that the strength of the shaft material is adequate in shrink disc designs. When using typical steels (e.g. C45, 42CrMo4), the torques listed in the selection tables can be used without restriction. When using material that is considerably weaker, please consult us. The average surface roughness Rz must not exceed 15 µm (turning operation is sufficient).

# It's good to know | why we are there for you

*"Our customers come first. Customer satisfaction is what motivates us. By thinking in terms of how we can add value for our customers we can increase productivity through reliability."*

*"We will provide you with exactly what you need – perfectly co-ordinated products and solutions with the right functions for your machines and installations. That is what we mean by 'quality'."*

*"Take advantage of our wealth of expertise. For more than 60 years now we have been gathering experience in various fields and implementing it consistently and rigorously in our products, motion functions and pre-configured solutions for industry."*

*"The world is our marketplace. Wherever you are in the world, we are nearby, providing you with our drive and automation solutions."*
